“Our rooftop infinity pool”

Features sunken loungers and a unique waterfall feature. The pool will use a saltwater system which has a range of health benefits compared with standard chlorine systems. Because they have lower chlorine levels, salt water pools are much gentler on the eyes and skin. Research indicates that salt water systems may be safer than chlorine pools, which force owners to store and handle unsafe chemicals.

“Environmentally efficient”

Econdo stands as one of the region’s most modern projects. Incorporating elements of sustainable development, with the goal of a more comfortable living experience, we invite you to relish in an environment that appeals to modern senses.

“Live at one with nature”

Health and Wellness is our priority! Surround yourself in an environment that caters to the modern person. Lush gardens and a tranquil atmosphere are your personal escape. Our on-site Health Cafe is available to keep you in check with delicious food, while an abundance of natural features will ensure you are always feeling your best. Welcome to Econdo, a new definition of living!

“Live at one with nature”

 All lights in the building will be light emitting diodes (LEDs) which help save electricity and reduce energy bills. Smart lighting will be installed in communal areas in order to reduce energy consumption. In addition, external garden and rooftop lighting will be solar powered reducing energy consumption even further.

 All electric appliances will meet Energy label No.5 (or higher) standards. This will help to lower utility bills and building maintenance costs whilst benefiting the environment.

 Water-saving appliances can help increase water efficiency. For example while older flush toilets often use up to around five gallons of water with every flush, modern eco-friendly designs do the job with only 1.28 gallons. Furthermore low flow faucets reduce water waste.
